Nebraska children

Kids Count in Nebraska is a children's data and policy project of Voices for Children in Nebraska. Key indicators measure the well-being of children in five areas: health, education, economic stability, child welfare, and juvenile justice.

This research is funded by the Annie E. Casey Foundation, with support from Presbyterian Church of the Cross and Katie Weitz, Ph.D. We thank them for their support and acknowledge that the findings and conclusions presented in this report are those of the author(s) alone, and do not reflect the opinions of these organizations or individuals.

An important component of this project is the Technical Team of Advisors, members of which provide data and expertise on child well-being in our state. The *Kids Count* Technical Team, comprising representatives from numerous agencies and organizations in Nebraska and other research experts, provides invaluable information for this project each year. Without their interest, support, and partnership, *Kids Count* would be impossible to produce.

Kids Count in Nebraska Reports from 2008 to 2020 are available for download at www.voicesforchildren.com/kidscount.

Additional copies of the *Kids Count in Nebraska 2019 Report*, as well as reports from 1993 through 2020, are available from:

TABLE OF CONTENTS & LETTER

Dear Kids Count Reader,

Welcome to the 28th edition of the *Kids Count in Nebraska Report*! This year's report brings with it all the updated data on child well-being in Nebraska that you have come to expect year after year. As always, we have added a few indicators and updated some to make them even more relevant, making this year's report our most comprehensive and in-depth look at the overall status of Nebraska's children.

The year this report was written (2020) was a year like no other. The impact of the COVID-19 pandemic on child and family well-being was nothing short of devastating. While we expect a delay in the impact of this year to show up in the data, this year's report includes an early look at how the COVID-19 pandemic has impacted child and family well-being. Based on our Index of Race and Opportunity for Nebraska Kids race matters when determining a child's pathway to opportunity. To that end, our commentary also examines how racial inequities interplayed with the pandemic in ways that are likely to worsen existing inequality.

We hope you find this year's edition of the *Kids Count in Nebraska Report* helpful. As always, we welcome your feedback. This report exists to help you—whether you are a policymaker, legislative staff member, administrator, child advocate, educator or anyone else who wants to help ensure that all Nebraska's children have the opportunity to lead the happy and healthy life they deserve.

Finally, we want to extend our thanks to the many experts and data providers who lent their expertise to the production of this report. Thank you.

Please enjoy the 2020 *Kids Count in Nebraska Report*!

Kind Regards,

AUBREY MANCUSO, MSW
EXECUTIVE DIRECTOR

ALFONSO VACA-LUBISCHER

ABOUT VOICES FOR CHILDREN

Founded in 1987, Voices for Children in Nebraska has a 31-year track record of improving the lives of Nebraska's children and youth. As the independent, nonpartisan voice for children, we are not funded by state, federal, city, or county dollars. Our independence allows us to speak loud and clear and to shine the spotlight on the needs of children in our state.

MISSION:

Voices for Children in Nebraska is the independent voice building pathways to opportunity for all children and families through research, policy, and community engagement.

VISION:

We will engage the public and state leaders to build systems removing obstacles and promoting opportunities for ALL children to lead healthy, secure, and fulfilling lives.

VALUES:

All children deserve an equal opportunity to succeed in life. To ensure kids remain at the center of priorities and programs:

- Informed research drives our direction.
- When a policy is good, we support it; when it is harmful, we fight it; when it is missing, we can create it.
- Community engagement is how we promote systems change.

VOICES FOR CHILDREN IN NEBRASKA'S 2020 BOARD OF DIRECTORS:

Katie Weitz, PhD

CHILDREN ARE OUR STATE'S GREATEST RESOURCE, AND THE DECISIONS OUR LEADERS MAKE ABOUT THEM IMPACT OUR COLLECTIVE FUTURE.

Voices for Children in Nebraska has developed the following Pro-Kid Policy Plan, focusing on the issues of health, economic stability, child welfare, and juvenile justice. Our policy priorities are guided by research, data, and proven best practices that improve child well-being. We pay close attention to the impact of race, socioeconomic status, and geography, and seek to remove barriers to opportunity within these areas. This plan represents our vision for a Nebraska where strong communities allow all children to thrive.

VOICES FOR CHILDREN WORKS TO ENSURE THAT:

HEALTH

Children and families have access to affordable, quality physical and behavioral health care. Consistent and preventive health care gives children the best start to grow up to be healthy and productive adults.

ECONOMIC STABILITY

Families are able to achieve financial security, and children's basic needs are met. State economic policies support families in trying to build a better future and balance work and family life.

CHILD WELFARE

Children grow up in safe, permanent, and loving homes. An effective child welfare system strengthens families and minimizes trauma through timely and appropriate action.

JUVENILE JUSTICE

Youth are held accountable for their actions in developmentally appropriate ways that promote community safety and allow them to grow into responsible citizens.

CONTACTING ELECTED OFFICIALS

HOW TO USE YOUR VOICE ON BEHALF OF CHILDREN

Do you have something to share with elected officials about children's issues? It's easy to contact policymakers using these tools— a legislative map, contact information for your representatives, and a wealth of information and data at your fingertips.

COMMENTARY

Healthy and financially stable individuals who have equitable access to opportunity are the foundation of a thriving community. This year—2020—was a year of worldwide turmoil, uncertainty, and reckoning. A novel airborne disease, COVID-19, took nations by surprise and froze their economies, claimed the lives of their citizens, and transformed the way people work, study, meet, and live. According to John Hopkins University, the United States was among the hardest hit nations both in terms of mortality and infection rates by the end of the year.ⁱ In the U.S., Nebraska ranked number 5 in total cases per capita as of mid-December 2020.ⁱⁱ COVID-19 had infected more than 165,000 Nebraskans, hospitalized nearly 5,000, and taken the lives of over 1,500 residents, including some children.ⁱⁱⁱ By the year's end, the number of cases and deaths continued to rise (See Figure 1 and 2).^{iv, v} The economic impact has also been devastating. Since the pandemic began, 11% of Nebraskans with children have reported sometimes or often not having enough to eat, 41% have reported loss of income, and 19% have reported having slight or no confidence in affording next month's home payment.^{vi} Children and families have also experienced an increase in stress that can impact mental health. Two thirds (66%) of parents have reported feeling down or anxious, up from 41% in 2019.^{vi, vii} School systems increased their reliance on remote learning highlighting inequities in access to technology. Around 1 in 20 Nebraskans with children reported rarely or never having a computer or internet available for educational purposes, making remote learning virtually impossible for thousands of kids.^{vi} As staggering as they may be, these statistics do not and cannot capture the depth of the pain and struggle of Nebraskan families, nor can they predict the road ahead.

COVID-19 has been most damaging to older populations. As of mid-December, COVID-19 had accounted for 11.3% of all deaths in the U.S. among people over the age of 65, compared to 3.9% of all deaths among people under the age of 45.^{viii} The risk of severe illness from COVID-19 is increased for adults with certain underlying medical conditions, including cancer, obesity, sickle cell disease, and pregnancy.^{ix} During the early stages of the pandemic, the rate of infection was highest among people living in concentrated urban areas, but it has now spread across rural communities.^x COVID-19 has also taken a devastating and disproportionate toll on communities of color throughout the nation and across Nebraska. Although White people accounted for the majority (84%) of all COVID-19 deaths in Nebraska by the end of the year, the share of deaths, once adjusted for age, was overrepresented by Hispanics and African Americans (See Figure 3).^{xi} While Hispanics and African Americans only make up 17% of the Nebraska population, they accounted for more than half of the age-adjusted COVID-19 deaths by mid-December 2020.^{xi} When haphazard diseases discriminate between populations across insubstantial differences, such as race and ethnicity, then the driving underlying condition is not medical but social and systemic. This is the experience of communities of color living in a country where the predominant culture reinforces white supremacy—the social, economic, and political systems that stem from the belief that white people constitute a superior race and that enable white people to maintain power over others.^{xii} While 2020 brought once-in-a-century health and economic crises throughout the globe, people and families of color across Nebraska have experienced constant pandemic-like crises that have been exacerbated by COVID-19.

FIGURE 1.^{IV, V} COVID-19 DEATHS PER 100,000 OVER TIME (2020)

In this chart, the lines represent the total number of COVID-19 confirmed cases per 100,000 people over time for Nebraska and the United States.

FIGURE 2.^{IV, V} COVID-19 CASES PER 100,000 OVER TIME (2020)

In this chart, the lines represent the total number of COVID-19 deaths per 100,000 people over time for Nebraska and the United States.

COMMENTARY

FIGURE 3.^{xi} COVID-19 DEATHS DISTRIBUTION AGE-ADJUSTED (2020)

In this chart, the bars represent the share of age-adjusted COVID-19 deaths and population by race and ethnicity. The share of age-adjusted COVID-19 deaths of African American and Hispanic Nebraskans is three times their share of the population.

The results of various analyses using data from the U.S. Census Bureau, the U.S. Bureau of Labor Statistics, and the Centers for Disease Control and Prevention indicate three key conclusions:

1. In Nebraska, the overall experiences of families of color prior to the pandemic have been more dire than what White families experienced during 2020.
2. Since the pandemic, families of color have fared worse in Nebraska than many families in other states.
3. In Nebraska, families of color have experienced worse economic and health outcomes due to the pandemic compared to White families.

FAMILIES OF COLOR AND THE PANDEMIC

What Nebraskan families of color experienced in 2020 is not unlike what they experienced in previous years. Even with the higher death rates caused by COVID-19, the estimated 2020 age-adjusted death rate for White Nebraskans, for example, is far below that of African American and Native American Nebraskans from previous years (See Figure 4).^{v, xiii, xiv} Despite the high unemployment rates caused by the pandemic, the unemployment rate of White workers and families in 2020 was still much lower than that of non-White workers and families before COVID-19 (See Figure 5 and 6).^{xv} Even with the record food and housing insecurity and the lack of health insurance caused by the economic crisis, White families fared better in 2020 than non-White families in previous years. While 8% of White Nebraskan families have reported food insufficiency since the beginning of the pandemic, 42% of African American families and 16% of Hispanic families in Nebraska have reported food insufficiency prior to the pandemic (See Figure 7).^{vi} Though 13% of White families reported slight or no confidence in affording next month's housing payment in 2020, a much higher rate of African American, Native American, and Hispanic households with children were severely cost burdened in previous years, meaning that more than 50% of their income went towards housing (See Figure 8).^{vi, xvi} The same can be said about lack of health insurance; more African American, Hispanic, and American Indian families in Nebraska lacked health insurance in previous years than White Nebraskan families did in 2020 (See Figure 9).^{vi, xvi}

FIGURE 4. ^{v, xiii, xiv} AGE-ADJUSTED DEATH RATE PER 100,000 PEOPLE (2012-2018)

In this chart, each grouping represents each year's age-adjusted death rate. The estimated 2020 age-adjusted death rate for White Nebraskans is lower than that of African Americans and Native Americans in Nebraska for the past seven years. See methodology for details.

FIGURE 5. ^{xv} UNEMPLOYMENT RATE OVER TIME BY RACE/ETHNICITY (2020)

In this chart, the lines represent the average unemployment rate for workers each year. The 2020 average unemployment rate for White Nebraskans, though higher than previous years, is still lower than that of workers of color in the previous six years.

COMMENTARY

FIGURE 6.^{xv} UNEMPLOYMENT RATE FOR NEBRASKANS WITH CHILDREN (2020)

In this chart, the lines represent the average unemployment rate for workers with children each year. The 2020 average unemployment rate for White Nebraskaans with children, though higher than previous years, is still lower than that of workers of color with children in the previous six years.

FIGURE 7.^{vi} FOOD INSUFFICIENCY FOR HOUSEHOLDS WITH CHILDREN (2020)

In this chart, the bars represent the percentage of Nebraska adults with children who reported sometimes or often not having enough to eat, the dark blue indicating prior to the pandemic and the light blue after the pandemic. White Nebraskan parents reported lower food insecurity after the pandemic than Non-White parents (excluding Asian) reported prior to COVID-19.

FIGURE 8.^{vi, xvi} SEVERELY COST BURDENED HOUSEHOLDS BY RACE AND ETHNICITY VS CURRENTLY (2020) HOUSING INSECURE WHITE HOUSEHOLDS (2013-2020)

In this chart, the lines represent the percentage of householders with children who paid more than 50% of their income for housing. The dotted line represents the percentage of White Nebraskan parents who, in 2020, reported having slight to no confidence in affording next month's housing payments. Although these two metrics are not perfectly comparable, they show that in Nebraska, White parents were less likely to be housing-insecure in 2020 than African American, Native American, and Hispanic parents were to be severely cost-burdened from 2013 to 2018.

FIGURE 9.^{vi, xvi} NO HEALTH INSURANCE OVER TIME BY RACE/ETHNICITY (2013-2018)

In this chart, the lines represent the percentage of adults with children who reported having no health insurance. The dotted line represents the percentage of White Nebraskan parents who reported lacking health insurance in 2020. White parents in Nebraska were less likely to be uninsured since COVID-19 than African American, Native American, and Hispanic parents from 2013 to 2018.

COMMENTARY

NEBRASKAN FAMILIES OF COLOR COMPARED TO FAMILIES IN OTHER STATES

Because of the relatively small sizes of the communities of color in Nebraska, the challenges facing families of color in the state are often overshadowed by the experiences of White families who make up the majority of the population. For example, Nebraska ranked #9 in overall child well-being and #4 in economic well-being in the *Annie E. Casey Foundation 2020 Kids Count Profile*.^{xvii} In addition, in the COVID-19 Kids Count Policy Report, Nebraska tied as #5 for lowest food insufficiency and #9 in lowest housing insecurity among adults with children.^{xviii} However, when the outcomes are compared by state and broken down by race and ethnicity, it becomes apparent that families of color fare worse in Nebraska than families in other states. While Nebraska tied at #5 for lowest percentage of adults who reported food insufficiency in the COVID-19 Kids Count Policy Report, for instance, Nebraska ranked last (#50) among African American families by a margin of 12 percentage points (See Figure 10).^{vi} Out of all 50 states, Mississippi had the highest percentage of White parents who reported food insufficiency (15.8%); still it is lower than that reported by Hispanic parents (16.4%) and African American parents (44.9%) in Nebraska (See Figure 10).^{vi}

Similarly, while Nebraska ranked #9 in lowest percentage of adults reporting housing insecurity in the COVID-19 Kids Count Policy Report, Nebraska ranked #49 among African American families and #47 among Other/Multi-racial families (See Figure 11).^{vi} Out of all states, Mississippi had the highest percentage of White parents reporting housing insecurity (27.7%), which is lower than the percentage of Hispanic (35.6%), African American (50%), and Other/Multi-racial parents (41.5%) in Nebraska who reported uncertainty about affording housing (See Figure 11).^{vi} A similar trend appears for parents reporting having fair or poor health; 22.3% of White parents in West Virginia (the state with the highest percentage of White parents reporting fair or poor health) compared to 28.8% of African American parents and 26.2% of Other/Multi-racial parents in Nebraska (See Figure 12).^{vi}

FIGURE 10.^{vi} FOOD INSUFFICIENCY BY STATE (2020)

In this chart, each circle represents a state ordered by the percentage of their residents with children who reported sometimes or often not having enough to eat since the pandemic began. Nebraska is represented by the blue circles. The dotted line represents the state (Mississippi) with the highest percentage of White parents reporting food insufficiency, which is lower than that reported by African American and Hispanic parents in Nebraska.

FIGURE 11.^{vi} HOUSING INSECURITY BY STATE (2020)

In this chart, each circle represents a state ordered by the percentage of their residents with children who reported having slight or no confidence of affording next month's housing payments. Nebraska is represented by the blue circles. The dotted line represents the state (Mississippi) with the highest percentage of White parents reporting housing insecurity, which is lower than that reported by African American, Other/Multi-racial, and Hispanic parents in Nebraska.

FIGURE 12.^{vi} FAIR TO POOR HEALTH STATUS (2020)

In this chart, each circle represents a state ordered by the percentage of their residents with children who reported having fair or poor health since the pandemic. Nebraska is represented by the blue circles. The dotted line represents the state (West Virginia) with the highest percentage of White parents reporting fair/poor health, which is lower than that reported by African American and Other/Multi-racial parents in Nebraska.

FAMILIES OF COLOR COMPARED TO WHITE FAMILIES IN NEBRASKA

Although significant disparities between racial and ethnic groups have always been prevalent, they have been exacerbated by the pandemic. Compared to White Nebraskan parents:

- African American parents were 3.8 times more likely to report housing insecurity, 4.7 times more likely to report lacking health insurance, and 5.6 times more likely to report food insufficiency.^{vi}
- Other/Multi-racial parents were 3.2 times more likely to report housing insecurity, 2.8 times more likely to report rarely or never having a computer or internet available for educational purposes, and 1.7 times more likely to report feeling down or anxious more than half the days.^{vi}
- Hispanic parents were three times more likely to report not having health insurance, 2.8 times more likely to report housing insecurity, and 2.2 times more likely to report rarely or never having a computer or internet available for educational purposes.^{vi}

**FIGURE 13.^{vi} PERCENT OF ADULTS WITH CHILDRENS
AND WITHOUT HEALTH INSURANCE**

In this chart, the bars represent the percentage of Nebraskan adults with children who reported having no health insurance.

FIGURE 14.^{vi} PERCENT OF ADULTS WITH CHILDREN WHO ARE HOUSING INSECURE

In this chart, the bars represent the percentage of Nebraskan adults with children who reported having slight to no confidence of affording next month's housing payment.

FIGURE 15.^{vi} PERCENT OF ADULTS REPORTING NO INTERNET AND COMPUTER AVAILABILITY FOR EDUCATION (2020)

In this chart, the bars represent the percentage of Nebraskan adults with children who reported rarely or never having internet or a computer available for educational purposes.

FIGURE 16.^{vi} PERCENT OF ADULTS WITH CHILDREN FEELING DOWN OR ANXIOUS (2020)

In this chart, the bars represent the percentage of Nebraskan adults with children who reported feeling down or anxious for more than half the days.

COMMENTARY

This past year brought a lot of uncertainty and difficulty to families across Nebraska and all over the world. As the new year begins with new hopes of widespread vaccination against COVID-19, it is important to continue fighting for a solution against the underlying conditions that propels disproportionate outcomes for communities and families of color. These statistics show the effects of the global health pandemic and how they are exacerbated when compounded with the social conditions established by a white supremacy culture in the United States. Social constructs like white supremacy are even harder to address than the COVID-19 pandemic since the illness is ideological, not biological. In order to foster a Nebraska where all children can thrive, we must work to urgently reform the systems that continue to perpetuate trauma and injustice. Similar to the effort put forth by health care professionals to defeat COVID-19, it will take tremendous and deliberate effort by policymakers, educators, and individuals to address the inequities and injustices for families of color.

We empathize with all the lives lost to the global pandemic and we stand in solidarity with the families who have lost loved ones due to racial violence, including George Floyd, Breonna Taylor, Ahmaud Arbery, and James Scurlock. Black Lives Matter.

RECOMMENDATIONS:

1. **DISAGGREGATE DATA BY RACE AND ETHNICITY.** Data that is not disaggregated masks inequities for communities of color and limits the ability of state leaders to direct resources where they are needed most.
2. **REQUIRE RACIAL IMPACT STATEMENTS ON POLICY CHANGES.** Racial impact statements should be considered as part of any new policy proposals to determine the likely impact for different communities and to work toward addressing systemic biases in our current policies and programs.
3. **LEVERAGE AND EXPAND ACCESS TO STATE AND FEDERAL PROGRAMS.** Programs like SNAP (Supplemental Nutrition Assistance Program), also known as food stamps, and child care assistance provide essential economic support to families to help them meet basic needs and work toward financial stability. Federal, state and local officials should work to make these programs more accessible and available to help families recover from the pandemic.
4. **ENACT POLICIES THAT ENSURE THAT FAMILIES CAN CONTINUE TO BALANCE HEALTH NEEDS AND EMPLOYMENT.** Policies like mandatory earned sick days and paid family and medical leave ensure that families can remain financially stable during an acute health crisis. They also protect individual and public health now and into the future.
5. **INCREASE ACCESS TO MENTAL HEALTH SERVICES.** Ensuring that mental health services are widely available and affordable is an essential component in supporting children and families as they recover from a time of unprecedented challenges. More public support of mental health infrastructure is needed to ensure that Nebraska is prepared to address emerging and ongoing mental health needs.

FIGURES 1 AND 2

The number of cases and deaths reported by the CDC^{iv} were as of December 15, 2020. These daily numbers were divided by the total estimated population of the United States and Nebraska^v and multiplied by 100,000.

FIGURE 3

The age-adjusted COVID-19 deaths distribution was calculated by the CDC^{xi} as of December 17, 2020. The figure shows the age-adjusted deaths and the unweighted distribution of the population.

FIGURE 4

The total number of deaths of White Nebraskans, according to the CDC data set used^{xiv}, were from February 1st, 2020 to December 5th, 2020. It is important to note that according to the CDC, these numbers do not represent all deaths that occurred in that period, because the reporting process can last from one week to eight weeks or more. With this in mind, we assume that the deaths reported in this dataset are an estimate of those that occurred in the 10-month period between February and November. Using estimated White Nebraskan population from 2010 to 2019^v, we forecasted an estimate for the White population or 2020 by age groups. Using these forecasted estimates, we calculated the crude 2020 death rate (from February through November) of each of these age groups. To estimate the age-adjusted death rate for this time period, we weighted the age groups using the 2000 U.S. Standard Million. Using mortality data from the Wonder CDC Data Portal,^{xiii} we followed this same methodology to estimate the age-adjusted death rates by race and ethnicity for February through November of 2012 to 2018.

FIGURE 5

Using the Current Population Survey data^{xv}, the average annual unemployment rate for all workers by race and ethnicity was calculated by averaging all the months with unemployment data available. If a racial/ethnic group had fewer than four months of data for any given year, it was given a null value. Instead, the average between the previous year's unemployment rate and the following year's unemployment rate was calculated to create a continuum between the years but greyed out to indicate insufficient data.

FIGURE 6

Using the Current Population Survey data^{xv}, the average annual unemployment rate for workers who reported having at least one own child in the household grouped by White and Non-White was calculated by averaging all the months with unemployment data available. Neither of the groups had fewer than four months of data for any given year.

COMMENTARY

FIGURES 7, 10-16

Using data from the U.S. Census Bureau's Household Pulse Survey^{vi} from weeks one to 18 (April 23rd to November 9th), these estimates were calculated for respondent who reported having at least one person under 18-years-old in the household.

- Food insufficiency prior to COVID-19 is defined as those respondents who reported sometimes or often not having enough to eat prior to March 13, 2020. Food insufficiency after COVID-19 is defined as those respondents who reported sometimes or often not having enough to eat for the last seven days
- Housing insecurity is defined as those respondents who reported having slight or no confidence of affording next month's mortgage or rent payments.
- Having no internet or computer for educational purposes is defined as those respondents who reported rarely or never having either a computer or internet for educational purposes.
- Feeling down or anxious for more than half the days is defined as those respondents who reported either feeling anxious or down during the previous seven days for either more than half the days or nearly every day.
- No health insurance coverage is defined as those respondents who marked "No" to all health insurance coverage options: 1) Health care through a current or former employer or union (including through another family member); 2) Direct purchase from an insurance company, including marketplace coverage; 3) Medicare; 4) Medicaid, Medical Assistance, or any kind of government-assistance plan; 5) TRICARE or other military health care; 6) Veterans Affairs (VA); 7) Indian Health Coverage; and 8) Other.
- Fair or poor health status is defined as those respondents who reported their general health status as either fair or poor.

FIGURE 8

Using the IPUMS USA 5-year estimates data from 2013 to 2018^{xvi}, we calculated the percentage of householders with at least one own child in the household who reported paying having a household income of less than twice their housing payments. For comparison, we added the percentage of White adults with children who reported having slight or no confidence in affording next month's rent or mortgage payments in the 2020 Household Pulse Survey.^{vi}

- For renters, housing payments are defined as their gross monthly rental cost multiplied by 12. These include the cost of the housing unit, utilities, and fuel costs
- For homeowners, housing payments are defined as the derived sum of monthly payments for owner-occupied units multiplied by 12. These include any debts on the property (e.g. mortgage, deeds of trust, etc.); real estate taxes; fire, hazard, and flood insurance; utilities; and fuels.

FIGURE 9

Using the IPUMS USA 5-year estimates data from 2013 to 2018^{xvi}, we calculated the percentage of householders with at least one own child in the household who reported having no health insurance. For comparison, we added the percentage of White adults with children who reported having no health insurance in the 2020 Household Pulse Survey.^{vi}

BRFSS

The percentage of parents who reported feeling down or anxious in 2019 is defined as those respondents from Nebraska with children in the 2019 BRFSS Survey^{vii} who reported having one or more days in the past 30 days when their mental health was not good (including stress, depression, and problems with emotions).

RACE & OPPORTUNITY INDEX

Nebraska was founded under values of opportunity and equality for all, but when looking at the data on Nebraska's children and families, a harsher reality is uncovered – one of disparity and lack of equitable chance of future success and opportunity for children of color. In response to this, the *Index of Race & Opportunity for Nebraska Children* was created. A composite score of 13 indicators of child well-being was calculated to highlight disparities in opportunity and measure progress toward race equity and inclusion.

EDUCATION

- 3 and 4 year olds enrolled in school
- Reading proficiently at 3rd grade
- 16-24 year olds employed or attending school

HEALTH

- Children with health insurance coverage
- Infants receiving adequate prenatal care

JUVENILE JUSTICE

- Youth who have completed a diversion program successfully
- Youth not involved in probation

ECONOMIC STABILITY

- Children living above the Federal Poverty Level
- Median family income
- Children living in a low-poverty areas

CHILD WELFARE

- Children not involved in the child welfare system
- Children who are involved in the child welfare system, but are living at home
- Children who are living in out-of-home care, but have done so in three or fewer placements

OVERALL INDEX SCORES OUT OF A POSSIBLE 100

7 KEY STEPS

Used to help advance and embed race equity and inclusion at all levels of policy creation

STEP 1

Establish an understanding of race equity and inclusion principles.

STEP 2

Engage affected populations and stakeholders.

STEP 3

Gather and analyze disaggregated data.

STEP 4

Conduct systems analysis of root causes of inequities.

STEP 5

Identify strategies and target resources to address root causes of inequities.

STEP 6

Conduct race equity impact assessment for all policies and decision making.

STEP 7

Continuously evaluate effectiveness and adapt strategies.

11. Nebraska Department of Health and Human Services.

12. Nebraska Crime Commission, Diversion.

13. Nebraska Juvenile Probation System.

* These data were calculated by dividing the number of children involved in probation by Nebraska's total children population (ages 11 to 19) and multiplying the quotient by 1,000. These numbers were then subtracted from 1,000 to show the ratio of children not involved in probation.

POPULATION

2020 CENSUS IS CRITICAL FOR KIDS

The premise of Kids Count is and has always been that good data can help drive good decisions. Without knowing where children, families, and our communities stand now, we cannot know where the most effective solutions lie. The U.S. Census is one of the most important tools for learning how communities are faring, which guides policymakers and other leaders over the next decade. The results of the 2020 Census will determine how much funding is received each year at the state and local level as well as how electoral boundaries are designed.

By the end of the Census count in October 2020, Nebraska ranked 4th nationally in self-response rates with 71.9% of Nebraskan households responding to the 2020 Census online, by mail, or by phone.¹ This is higher than the national response rate of 67%.¹ This is also a slight improvement from the 2010 Census, when 71.1% of Nebraskans self-responded to the Census.²

Thank you to everyone who participated, promoted, and advocated so that every single Nebraskan is counted!

6. U.S. Census Bureau, 2019 American Community Survey 1-year Estimates, Table B10002.

A young child with dark, curly hair is looking towards the camera. A hand is using a stethoscope to examine the child's chest. The entire image is overlaid with a semi-transparent red filter. The word "HEALTH" is written in large, white, bold, sans-serif capital letters at the bottom of the image.

HEALTH

Every child and family deserves access to affordable, quality physical and behavioral health care.

Quality and consistent preventive health care, beginning even before birth, gives children the best chance to grow up to be healthy and productive adults.

Children and families must be able to access and maintain affordable health insurance, and policies should maximize availability and robust investment in Medicaid and the Children's Health Insurance Program. Our health care systems and policies should prioritize preventative services including immunization, developmental screenings, early intervention, and home visiting. Policies should promote timely and equitable access to a complete range of health care services within a health home and community-based environments for children and families across the lifespan.

4. U.S. Census Bureau, 2019 American Community Survey 5-year estimates, Table B27001F-G.

* "Children" category combines Medicaid and CHIP coverage. "Adults" are those aged 19-64 receiving Aid to Dependent Children, or temporary cash assistance through the state of Nebraska.

BEHAVIORAL HEALTH

An estimated **47,691** Nebraska children have been diagnosed with a mental/behavioral condition needing treatment.¹

Many children in Nebraska deal with behavioral health problems that may affect their ability to participate in normal childhood activities.

The National Survey of Children's Health estimates the number of Nebraska children facing the following disorders:¹

- ANXIETY: **34,079**
- ADD/ADHD: **26,562**
- DEPRESSION: **17,082**
- AUTISM SPECTRUM DISORDER: **9,753**

61.6% OF CHILDREN needing mental health counseling actually received it.¹

CHILDREN RECEIVING COMMUNITY-BASED BEHAVIORAL HEALTH SERVICES THROUGH DHHS (2019)³

PERCENT OF CHILDREN ELECTRONICALLY BULLIED **15.7%**

PERCENT OF CHILDREN WHO EXPERIENCED SEXUAL VIOLENCE **11.6%**

BLOOD LEAD LEVEL TESTING (2019)³

Exposure to lead may harm a child's
brain and central nervous system. Even
low blood lead concentrations can
cause irreversible damage such as:

- impaired physical and cognitive development,
- delayed development,
- behavioral problems,
- hearing loss, and
- malnutrition.

The Centers for Disease Control uses a
reference level of five micrograms per
deciliter to identify children as having
an elevated blood lead level.

In 2019:

39,194 CHILDREN AGES 0 TO 5
had a blood lead level test.

**371 had confirmed elevated
blood lead levels,**
representing **0.9%** of
all children tested.

14 NEBRASKA CHILDREN
ages 1-18 were injured by
a firearm necessitating
hospitalization in 2019.⁴

5 were due to
accidental discharge.

7 were due to assault.

1 was undetermined.

1 intentional self-harm.

ADVERSE CHILDHOOD EXPERIENCES

ADVERSE CHILDHOOD EXPERIENCES

Adverse childhood experiences (ACEs) are potentially traumatic events that can have negative, lasting effects on health and well-being. Experiencing multiple ACEs results in compounding effects, and there is growing evidence that it is the general experience of multiple ACEs, rather than the specific individual impact of any one experience that matters. The experience of ACEs extends beyond the child and can cause consequences for the whole family and community.

NUMBER OF ACEs CHILDREN EXPERIENCE (2019)²

TYPE OF ACE (2019)¹

AMONG CHILDREN WITH 1 OR MORE ACE, THE FOLLOWING WERE DISPLAYED (2019)²

HEALTH SERVICES

NUMBER OF MEDICAL PROVIDER SHORTAGES BY COUNTY (2020)¹

	# OF SHORTAGES
PRIMARY	79
MENTAL	74
DENTAL	70

Health professional shortage areas are designations that indicate a shortage of health care providers in the areas of primary care, mental health care, or dental health care. Shortages fall into 3 categories:¹

- 1. GEOGRAPHIC AREAS** - a shortage of providers for the entire population within an area
- 2. POPULATION GROUPS** - a shortage of providers within an area for a specific high need population
- 3. FACILITIES** - health care facilities within an area have a shortage of health professionals to meet their needs

IMMUNIZATION SERIES COVERAGE (2010-2018)^{2,3}

IMMUNIZATIONS (2018)²

77.8% of Nebraska children had received the primary immunization series* by age three.

84.0% of Nebraska teens were immunized against meningitis caused by types A, C, W, and Y.

66.6% of Nebraska teen girls and **59.0%** of Nebraska teen boys completed their HPV vaccine series.

CHILDREN WITH A MEDICAL HOME (2019)^{3,4}

A patient-centered medical home is a primary care physician or provider that serves as a child's usual source of care. It is an important mechanism for coordination of all segments of health - physical, behavioral, and oral.

80.1% of children had a preventive dental visit in the past year.⁴

90.1% of children are in very good to excellent health.⁴

37.1% of children had one or more current health conditions.⁴

78.7% of children had a preventive medical visit in the past year.⁵

EDUCATION

Education is the best way to build a pathway to lifelong success, and the early years of a child's life are imperative to laying a solid foundation for success. Establishing the conditions that promote educational achievement for children is critical. With a strong and healthy early beginning, children can more easily stay on track to remain in school, graduate on time, pursue postsecondary education and training and enjoy a successful transition into adulthood. Closing gaps in educational access and quality is key to ensuring the future workforce can compete and build or continue the cycle of success and independence.

STEP UP TO QUALITY

NEBRASKA STEP UP TO QUALITY PROGRAMS BY COUNTY (AS OF 10/15/2020)

STEP UP TO QUALITY PROGRAMS	
486 PROGRAMS (10/15/2020)	
STEP 1	211
STEP 2	150
STEP 3-5	125

Nebraska Step Up to Quality is an Early Childhood Quality Rating and Improvement System (QRIS), passed by the Nebraska Legislature in 2013. The primary goal of Nebraska Step Up to Quality is to improve early care and education quality and increase positive outcomes for young children. This is done through informing parents about quality early care and education programs in understandable and measurable ways. In addition, it improves teacher and director effectiveness through training, professional development, formal education, and coaching. It also emphasizes strengthening the understanding and use of standards, assessment processes, and using data to improve quality.

AS OF 10/15/2020 NEBRASKA HAD

486 STEP UP TO QUALITY PROGRAMS

STEP UP TO QUALITY PROGRAM PROVIDERS BY STEP (10/15/2020)

211 PROVIDERS - STEP 1: The program has completed the application to participate in Step Up to Quality, staff members have submitted a professional record, and the program's director has completed orientation.

150 PROVIDERS - STEP 2: The program director completed several trainings related to safety, child health, early learning, and management, as well as several self assessments related to child development knowledge.

125 PROVIDERS - STEPS 3-5: Once programs achieve Step 2 they are eligible for coaching services. Early childhood coaches help guide programs as they set goals to make program improvements. During the rating process, programs earn points in the following standard areas, curriculum, learning environments & interactions, child outcomes, professional development and training, family engagement & partnerships, and program administration. Step 3-5 ratings are determined by the number of points achieved.

EARLY CHILDHOOD EDUCATION

SCHOOL-BASED PRESCHOOL (2018/19)¹

18,255

children were enrolled in public school-based preschool.

PUBLIC SCHOOL PRESCHOOL ENROLLMENT (2000/01 - 2018/19)¹

6,340

children were served in 19 Early Head Start and 19 Head Start programs in the 2018/19 program year.²

144

pregnant women were served in Early Head Start in the 2018/19 program year.²

7.9%

of the children served by Early Head Start/Head Start in 2018/19 were homeless and

4.9

were in foster care.²

EARLY DEVELOPMENT NETWORK (2018/19)

The Early Development Network (EDN) serves infants and toddlers, birth to age three, with disabilities and their families.

2,331

infants and toddlers had an Individualized Family Service Plan through EDN.

1,955 with a developmental delay
129 with a speech language impairment
86 with a hearing impairment
32 with autism
129 with some other disability

MATH PROFICIENCY

Math skills are essential for functioning in everyday life, as well as for future success in our increasingly technical workplace. Students who take higher courses in mathematics are more likely to attend and complete college. Those with limited math skills are more likely to find it difficult to function in everyday society and have lower levels of employability.

ECONOMIC STABILITY

SAVING FOR THE FUTURE

Our children, communities, and state are stronger when all Nebraska families are able to participate fully in the workforce and establish financial security. We must ensure that families are able to meet their children's basic needs and save for the future. A robust system of supports should help families make ends meet as they work toward financial independence. Hardworking families should have a fair share in the success of our state's economy. When families need assistance in meeting the basic needs of their children, public benefit programs should work efficiently and be easy for families to use. Parents should not have to choose between the job they need and the family they love. All families should have the opportunity to invest in their children's future and be able to access community resources that are well-funded by fair tax policies.

MAKING ENDS MEET

MAKING ENDS MEET

Nebraskans pride themselves on being hard-working people. In 2019, 79.4% of children in our state had all available parents in the workforce.¹ Unfortunately, having high labor force participation doesn't always translate into family economic stability.

The chart on the right illustrates the gap between low-wage earnings and the amount needed to provide for a two-parent family with two children. It assumes that both parents work full-time (40 hours a week), year round (52 weeks per year). That means no vacation, no sick time, just work.

The Federal Poverty Level doesn't describe what it takes for working families to make ends meet. For that we turn to the Family Economic Self-Sufficiency Standard (FESS). The FESS uses average costs, like fair median rent and the average price of a basic menu of food, to calculate what a family needs to earn to meet its basic needs without any form of private or public assistance. It does not include luxuries like dining out or saving for the future.

AID TO DEPENDENT CHILDREN (ADC) (SFY 2019)⁵

10,687 Average monthly number of children receiving ADC.

4,939 Average monthly number of families receiving ADC.

\$424 Average monthly ADC payment per family.

87 Number of cases reaching 60-month eligibility limit.

2.2 Average number of children per ADC family.

\$25,073,666 Total ADC payments (Includes both state and federal funds).

HOMELESSNESS

With funds from the Nebraska Homeless Assistance Program (NHAP), agencies served people who were experiencing homelessness or near homelessness. NHAP is funded through the Housing and Urban Development Emergency Solutions Grant Program and the Nebraska Homeless Shelter Assistance Trust Fund. Not all eligible people receive services with NHAP funding.

In 2019, with NHAP funds, homeless assistance providers served:

In 2019, HUD/NHAP served:

8,432 people experiencing homelessness.

1,597 children ages 18 and under experiencing homelessness.

2,536 families with children experiencing homelessness.

35 unaccompanied children experiencing homelessness.

2,760 people at risk of homelessness.

1,305 children at risk of homelessness.

2,130 families with children at risk of homelessness.

1 unaccompanied children at risk of homelessness.

SUPPLEMENTAL NUTRITION ASSISTANCE PROGRAM

The Supplemental Nutrition Assistance Program (SNAP) is one of the most effective anti-poverty programs in the United States. It provides nutrition assistance to families and individuals with low-incomes through benefits that can be used to purchase food at grocery stores, farmers markets, and other places where groceries are sold.

In Nebraska in 2017, SNAP moved about 8,700 households above the poverty line.

Source: *Characteristics of the Supplemental Nutrition Assistance Program Households: Fiscal Year 2017, USDA, Food Nutrition Services, The Office of Policy Support, Tables B.12, B.13.*

AVERAGE NUMBER OF CHILDREN ENROLLED IN SNAP (JUNE 2010-2019)²

CHILD WELFARE

Keeping our children and youth safe is essential to their healthy development. Children deserve to grow up in safe, permanent, and loving homes. An effective child welfare system works to strengthen families and minimize trauma through timely and appropriate action.

Families should be connected to resources in their community that strengthen their abilities to care for their children through a robust network of evidence-based services focusing on child abuse and neglect prevention that are able to meet families where they are. When children enter the child welfare system they are entitled to retain ties to their family, culture, and community. The administration and staff of agencies should reflect the diversity of the populations they serve and work in a way that honors children's unique heritage and cultural protective factors. Services must be trauma -informed , individualized, timely, and ongoing to maintain safety, well-being, and permanency.

CHILD MALTREATMENT

Federal law defines child maltreatment, otherwise known as abuse and neglect, as “any act or failure to act that results in death, serious physical or emotional harm, sexual abuse or exploitation, or any act or failure to act that represents an imminent risk of serious harm.”

In Nebraska, the vast majority (80%) of maltreatment is physical neglect, which is a failure to meet a child’s basic needs like food, shelter, and clothing; this is, in many cases, an economic issue.

WHY SHOULD WE BE CONCERNED?

Exposure to childhood abuse and neglect hinders children’s healthy social, emotional, and cognitive development. If untreated, toxic stress makes it more likely that children will adopt risky behaviors which negatively impact their future health and success. Given the impacts, we need to strengthen families to prevent abuse and neglect whenever possible, and take swift, thoughtful action to ensure that all children grow up in loving homes.

ALTERNATIVE RESPONSE IN 2019.

The majority of children who come into Nebraska's child welfare system are identified because their family is unable to meet their basic needs, which is often related to poverty. Alternative Response brings more flexibility to our state response to child maltreatment in certain low- or moderate-risk cases by allowing caseworkers to focus on harnessing the strengths of each family and building parental capacity through intensive supports and services.

64 FAMILIES

changed track from Alternative Response to Traditional Response after an average 26 days of involvement.

OUT-OF-HOME PLACEMENTS

WHERE ARE THE KIDS IN OUT-OF-HOME CARE? (12/31/2019)

3.3% Group home
(103 children)

1.0% Living independently
(30 children)

1.3% Missing Youth
(40 children)

0.5% Emergency shelter
(15 children)

2.2% Medical facility
(69 children)

38.9% Foster & adoptive homes
(1,198 children)

13.7% Kinship care
(420 children)

34.6% Relative home
(1,065 children)

4.4% Detention facility
(136 children)

THERE ARE THREE TYPES OF FOSTER PARENTS IN NEBRASKA:

- **RELATIVE FOSTER HOMES:** Foster parents who are related to the child or children whom they care for by blood, marriage, or adoption.
- **KINSHIP FOSTER HOMES:** Foster parents who have a significant pre-existing relationship with the child or children for whom they care. Examples are a current or former teacher, coach, or neighbor.
- **LICENSED FOSTER HOMES:** Foster parents who live at the licensed residence and care for a child or children whom they have not previously known.

Source: Nebraska Department of Health and Human Services (DHHS).

FOSTER HOME PLACEMENT BEDS (12/31/2019)

5,228 foster home beds were available in 2,357 homes.

1,235 beds in 722 approved homes.

3,993 beds in 1,635 licensed homes.

1,485 (58.3%) children in foster care were placed with relatives or kin

35.1% of foster home beds were in kin or relative homes

1,987 kids in out-of-home care also had a sibling in out-of-home care on 12/31/19

- 62.8% were placed with all siblings
- 82.5% were placed with at least one sibling

When children must be removed from their homes, it is important to ensure that their placement reduces the trauma of removal and promotes the well-being of the child. Congregate care, which places children in an institutional setting such as a group home or detention center, should be used minimally for out-of-home placements.

Research shows that placement in a family-like setting provides children with improved long-term outcomes in physical and emotional health. Although congregate care may be necessary for some children, for many others, it does not allow children to maintain the strong relationships with trusted adults that are essential for successful development.

PLACEMENT STABILITY

MULTIPLE PLACEMENTS

The Nebraska Department of Health and Human Services counts placement changes when a child moves from one foster care setting to another. Children in stable homes are reported to receive more attention, acceptance, affection, and better care from their foster parents. Children who are in stabilized homes are more likely to receive therapy, are less delinquent and oppositional/aggressive, and are more likely to be placed with competent and caring foster parents.

Source: University of Illinois, Child and Family Research Center, Placement Stability Study, 1999.

EXITING THE SYSTEM

Once in the child welfare system, children should be on a track toward achieving permanency in a safe, loving environment. Most of the time, that means they will be reunified with their family and return home. Other times, permanency may be achieved through adoption or guardianship.

EXITS FROM OUT-OF-HOME CARE (2010-2019)

549 children

were adopted in 2019.

532 adoptions were subsidized.

Mean time from becoming free for adoption to adoption:

10.1 MONTHS.

2,687 non-court involved children exited the system in 2019.

2,465 court involved children exited the system in 2019.

223 children exited into guardianships in 2019,

204 of which were subsidized and adoptions.

AGING OUT

Family support is key to any successful transition into adulthood, especially for youth who may have been exposed to trauma. Learning to be self-reliant in seeking employment and housing, managing finances, or seeking healthcare can be daunting without family connections. For youth who have been in foster care who do not exit the system to a family, ensuring a strong system of support in this transition is key. The Bridge to Independence (b2i) program works to address this issue. B2i serves youth who must be either working, seeking work, or in school. In return, they receive Medicaid coverage, a monthly stipend to use for living expenses, and an assigned caseworker on call 24/7 to help them navigate the transition to adulthood.

90 YOUTH

were in out-of-home care when they reached their 19th birthday in 2019.

98.9% were HHS wards

0.0% were OJS wards (youth placed at YRTC)

1.1% were both

The hand is positioned on the right side of the frame, with fingers extended towards the fence. The fence's diamond-shaped mesh is clearly visible across the background.

JUVENILE JUSTICE

A background image showing a hand reaching out and touching a chain-link fence. The hand is positioned on the left side, with fingers extended towards the fence. The fence is made of interlocking metal rings. The overall image has a purple tint.

Keeping our children and youth safe is essential to their healthy development. Youth should be held accountable for their actions in developmentally appropriate ways that promote community safety and allow them to grow into responsible citizens.

When youth act out they should be held accountable primarily by families, schools, and communities, avoiding contact with the juvenile justice system if at all possible. Youth entering and in the juvenile justice system are entitled to be safe and their rights must be respected. Retaining strong connections to family, community, and culture help youth thrive within the system. The juvenile justice system should be rehabilitative in nature and designed specifically for youth.

YOUTH ARRESTS BY RACE (2019)

STATUS OFFENSES

"Status offenses" are non-criminal behaviors, like skipping school, that could not be charged but for the "status" of being a minor.

Source: Nebraska Commission on Law Enforcement and Criminal Justice.

DISPROPORTIONATE MINORITY CONTACT

DISPROPORTIONATE MINORITY CONTACT (DMC)

Despite the promise of equal protection under the law, national research shows that youth of color are overrepresented in the juvenile justice system. This overrepresentation often is a product of decisions made at early points of contact with the juvenile justice system. Where racial differences are found to exist, they tend to accumulate as youth are processed deeper into the system.¹

Unfortunately, our juvenile justice system lacks uniform ways of collecting data on race and ethnicity. Although disparities exist across system points, different agencies have different ways of counting Hispanic youth in particular. Additional information on the race and ethnicity of youth arrested, on probation, and in adult prison are available elsewhere in this section.

PRE-TRIAL DIVERSION

JUVENILE DIVERSION PROGRAM

Pretrial diversion programs are based on the belief that many juvenile cases are better handled outside the courthouse doors. These voluntary programs are designed to provide eligible youth an opportunity to demonstrate rehabilitation and make things right with the community, while reducing the cost and burden to taxpayers and courts that come with formal charges being filed. By successfully completing his or her diversion plan, a minor has the opportunity to avoid formal charges in the court and get all record of the matter sealed. By diverting these cases from the court system, counties save significant dollars, making successful diversion programs a win-win.

3,920

youths were referred to the diversion program.¹

2,478

youths successfully completed diversion.¹

80

counties participated in the diversion program.¹

423

of those referred did not participate.¹

658

youths did not complete diversion successfully and were discharged for failing to comply or for a new law violation.¹

ACCESS TO COUNSEL

JUVENILE ACCESS TO COUNSEL

Having an attorney present during proceedings in the juvenile justice system is not only important for youth, but a guaranteed constitutional right. The right to counsel is also enshrined in Nebraska statute 43-272(1). The law is meant to protect children at every stage of legal proceedings, and requires the court to advise youth, along with their parents, of their right to an attorney, and that legal counsel can be provided at no cost if they are unable to afford it.

PATRICK J. THOMAS JUVENILE JUSTICE CENTER	114	45	3	71%	26%	3%	9.5	DANGER TO OTHERS (100%)

Research associates room confinement with serious consequences for mental and physical health including: - "Increased risk of self-harm and suicidal ideation; - Greater anxiety, depression, sleep disturbances, paranoia, and aggression; - Exacerbation of the on-set of pre-existing mental illness and trauma symptoms; and, - Increased risk of cardiovascular related health problems."³ Regulations, policies, and practices on when, how, and why juvenile room confinement is used differ among types of facilities. Room confinement should be used as the absolute last resort and only in cases of threats of safety to the individual or other residents and only after other interventions have failed. Room confinement should be time limited; the youth should be released as soon as they are safely able and should never last longer than 24 hours. During confinement, the youth should be closely monitored and seen by mental health professionals. All instances of room confinement should be recorded and reviewed.²

2. Office of Inspector General of Nebraska Child Welfare, Juvenile Room Confinement in Nebraska, 2018-2019 Annual Report.

3. Haney, C. *The Psychological Impact of Incarceration on Post-prison Adjustment. Prison to Home: The Effect of Incarceration and Reentry on Children, Families, and Communities*, 2001.

* In SFY2020, YRTC-Geneva was temporarily closed due to staffing shortages and facility damage and all female youth were moved to the YRTC-Kearney facility. Additionally, the Lincoln Facility was opened in February 2020. This year's data, therefore, is aggregated by male and female youth instead of by facility as it was published in previous years' reports.

YOUTH TREATED AS ADULTS

In 2019, **204 youth** cases were prosecuted in Nebraska adult courts, down from **1,972** in 2013.

Of the **204 youth** cases prosecuted in adult criminal court in 2019, **30%** were traffic cases, **37%** were misdemeanor cases, and **32%** were felony cases.

A MOTION TO TRANSFER FROM JUVENILE COURT TO ADULT COURT WAS REQUESTED IN **60 CASES** AND GRANTED IN **9**.

ADULT COURT HAD **117** MOTIONS TO TRANSFER TO JUVENILE COURT FILED, AND **96** CASES TRANSFERRED TO JUVENILE COURT.

AN AGE-APPROPRIATE RESPONSE

Research consistently indicates that treating children as adults neither acts as a deterrent, nor does it prevent crime or reduce violence - instead, prosecution in adult court exposes youth to more risks, delays or prevents treatment, and can burden them with permanent records which may act as barriers to future education and employment opportunities. Nebraska law requires that all children age 17 or younger charged with a misdemeanor or low-level felony must have their cases originate in juvenile court. This means that many more children are now receiving the benefit of speedy access to treatment services, a developmentally-appropriate court process aimed at rehabilitation, and the potential to have their records sealed to set them up for a brighter future.

*Cases may receive multiple sentencing types, so the total by sentence will add to higher than 196. These are only the cases that reached the point of sentencing in 2019.
